

How Much Water Is There On Proxima Cen B?

ABSCICON — APRIL 28 2017

RODRIGO LUGER

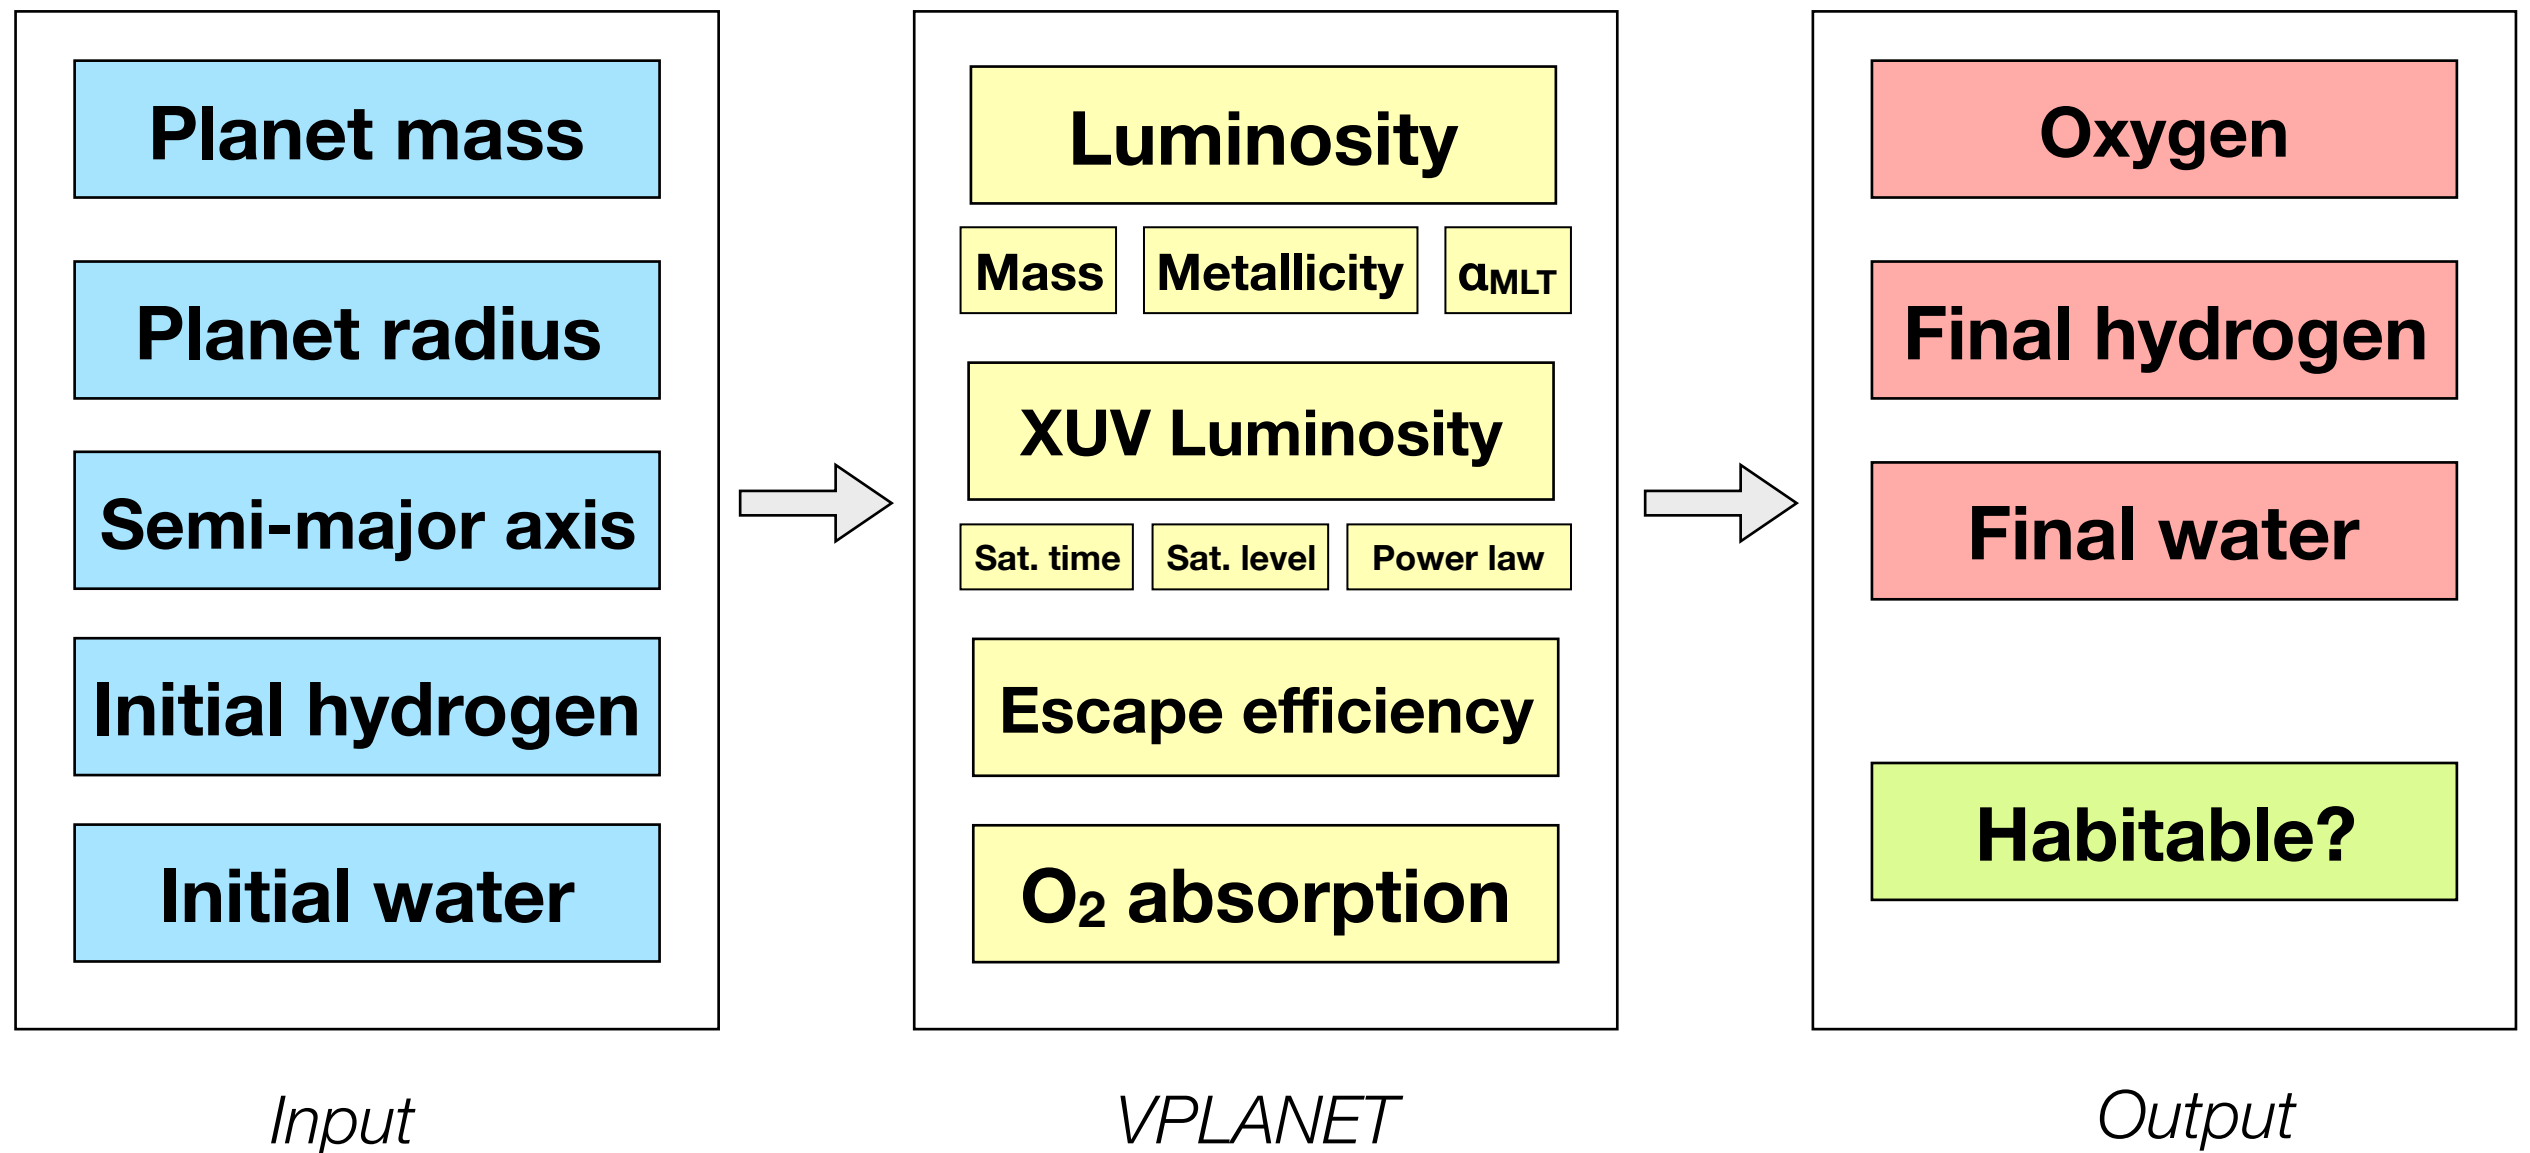

with RORY BARNES, RUSSEL DEITRICK, PETER DRISCOLL, THOMAS QUINN,
DAVID FLEMING, BENJAMIN GUYER, DIEGO McDONALD, AND THE VPL TEAM

Water Loss

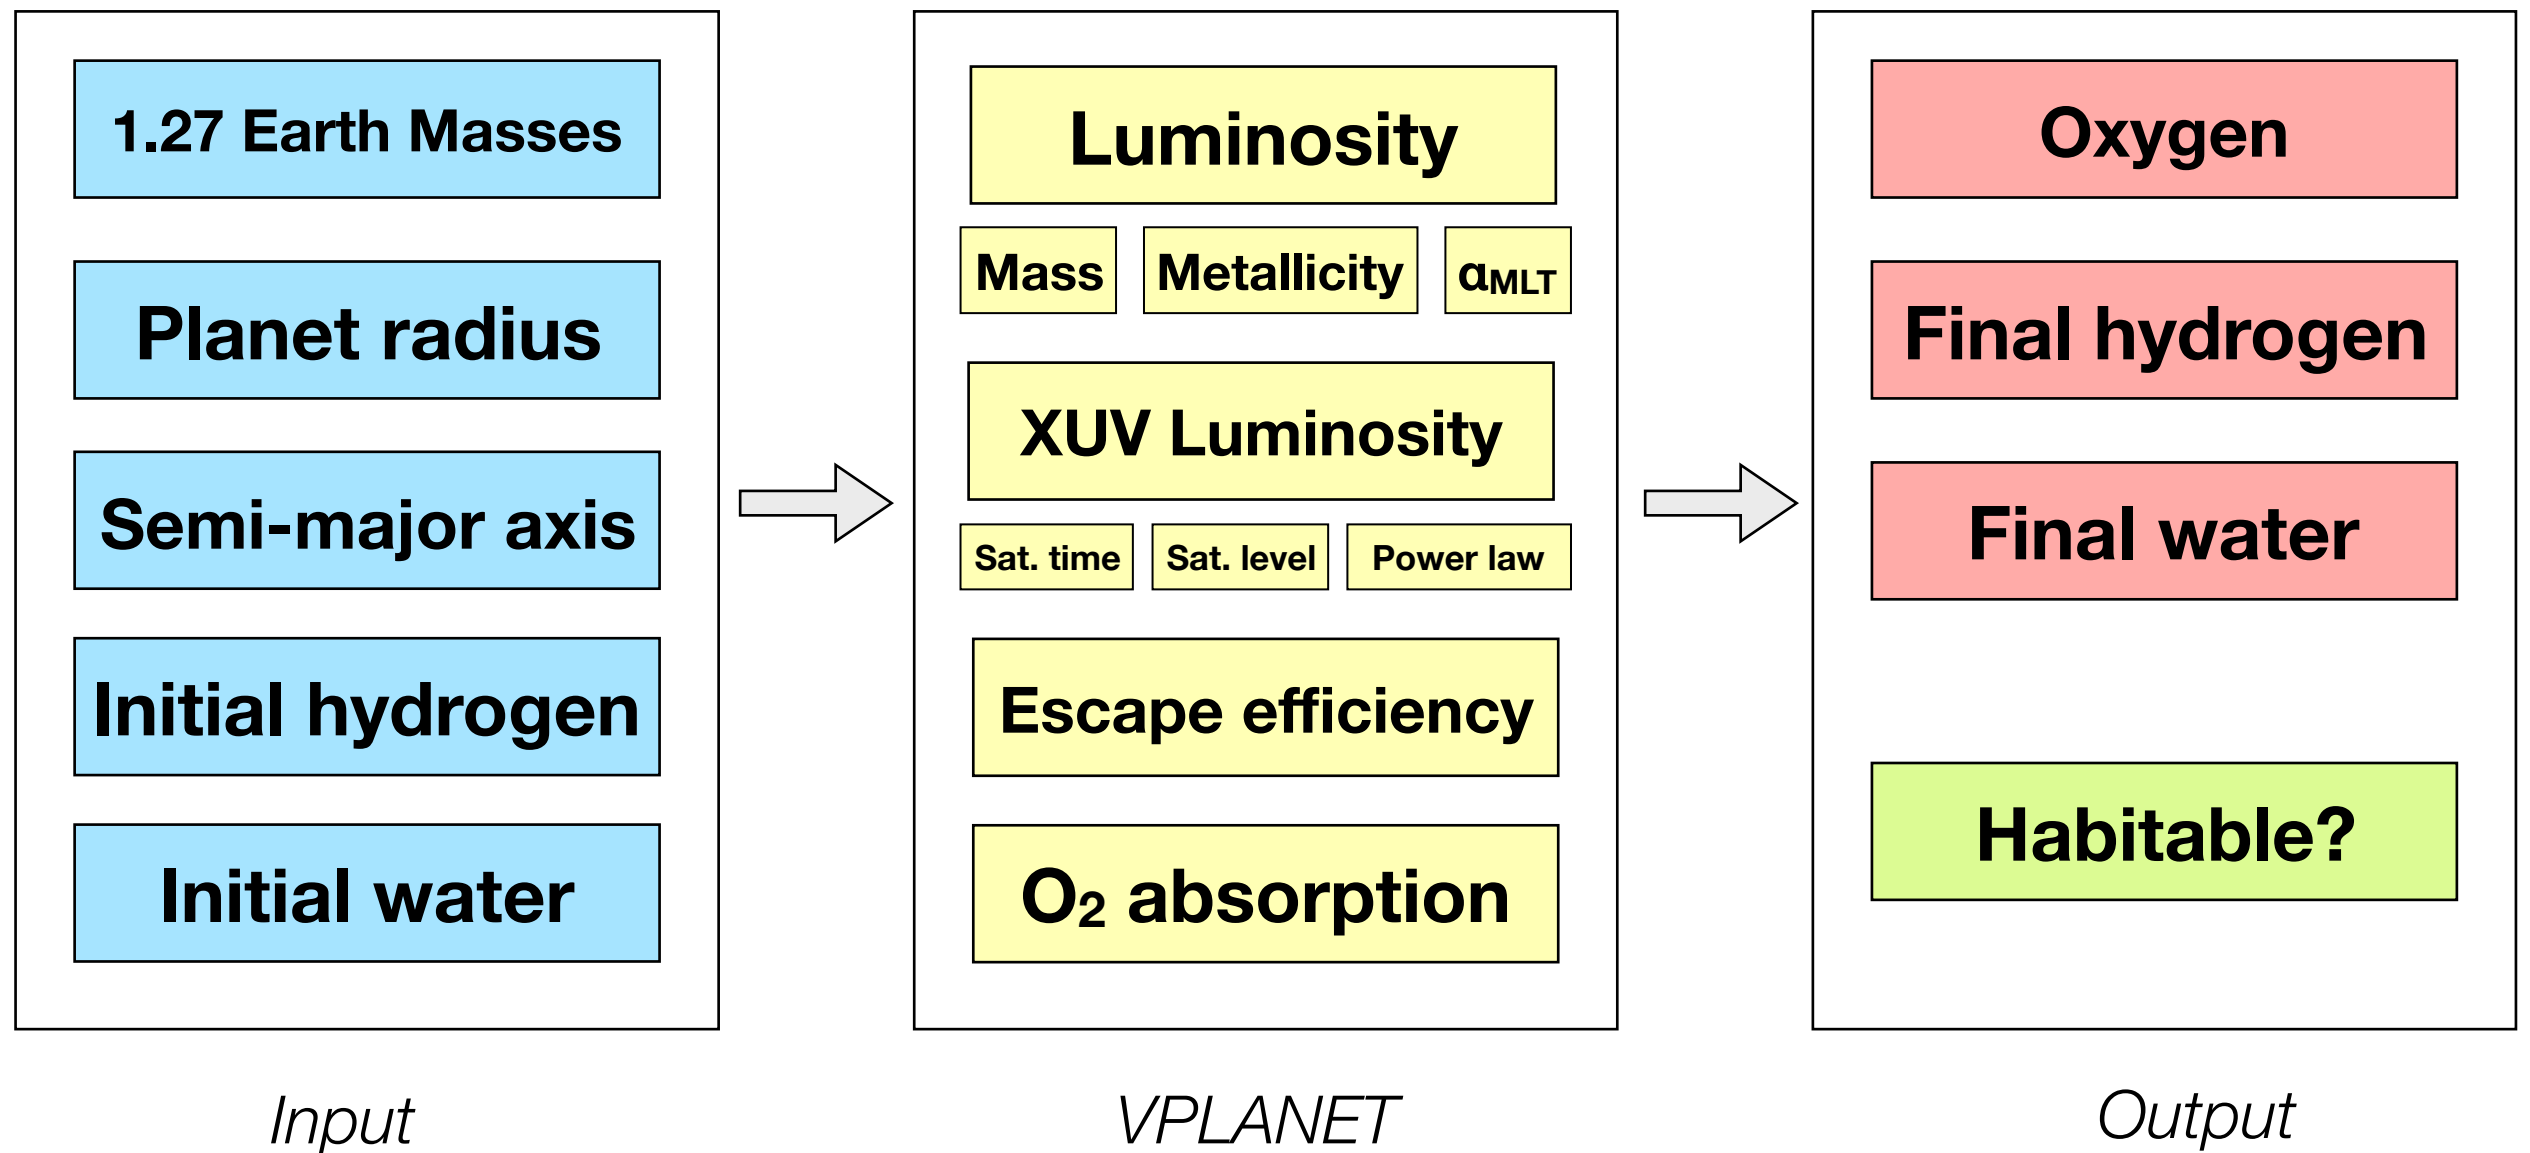

Luger and Barnes (2015)

Conclusions

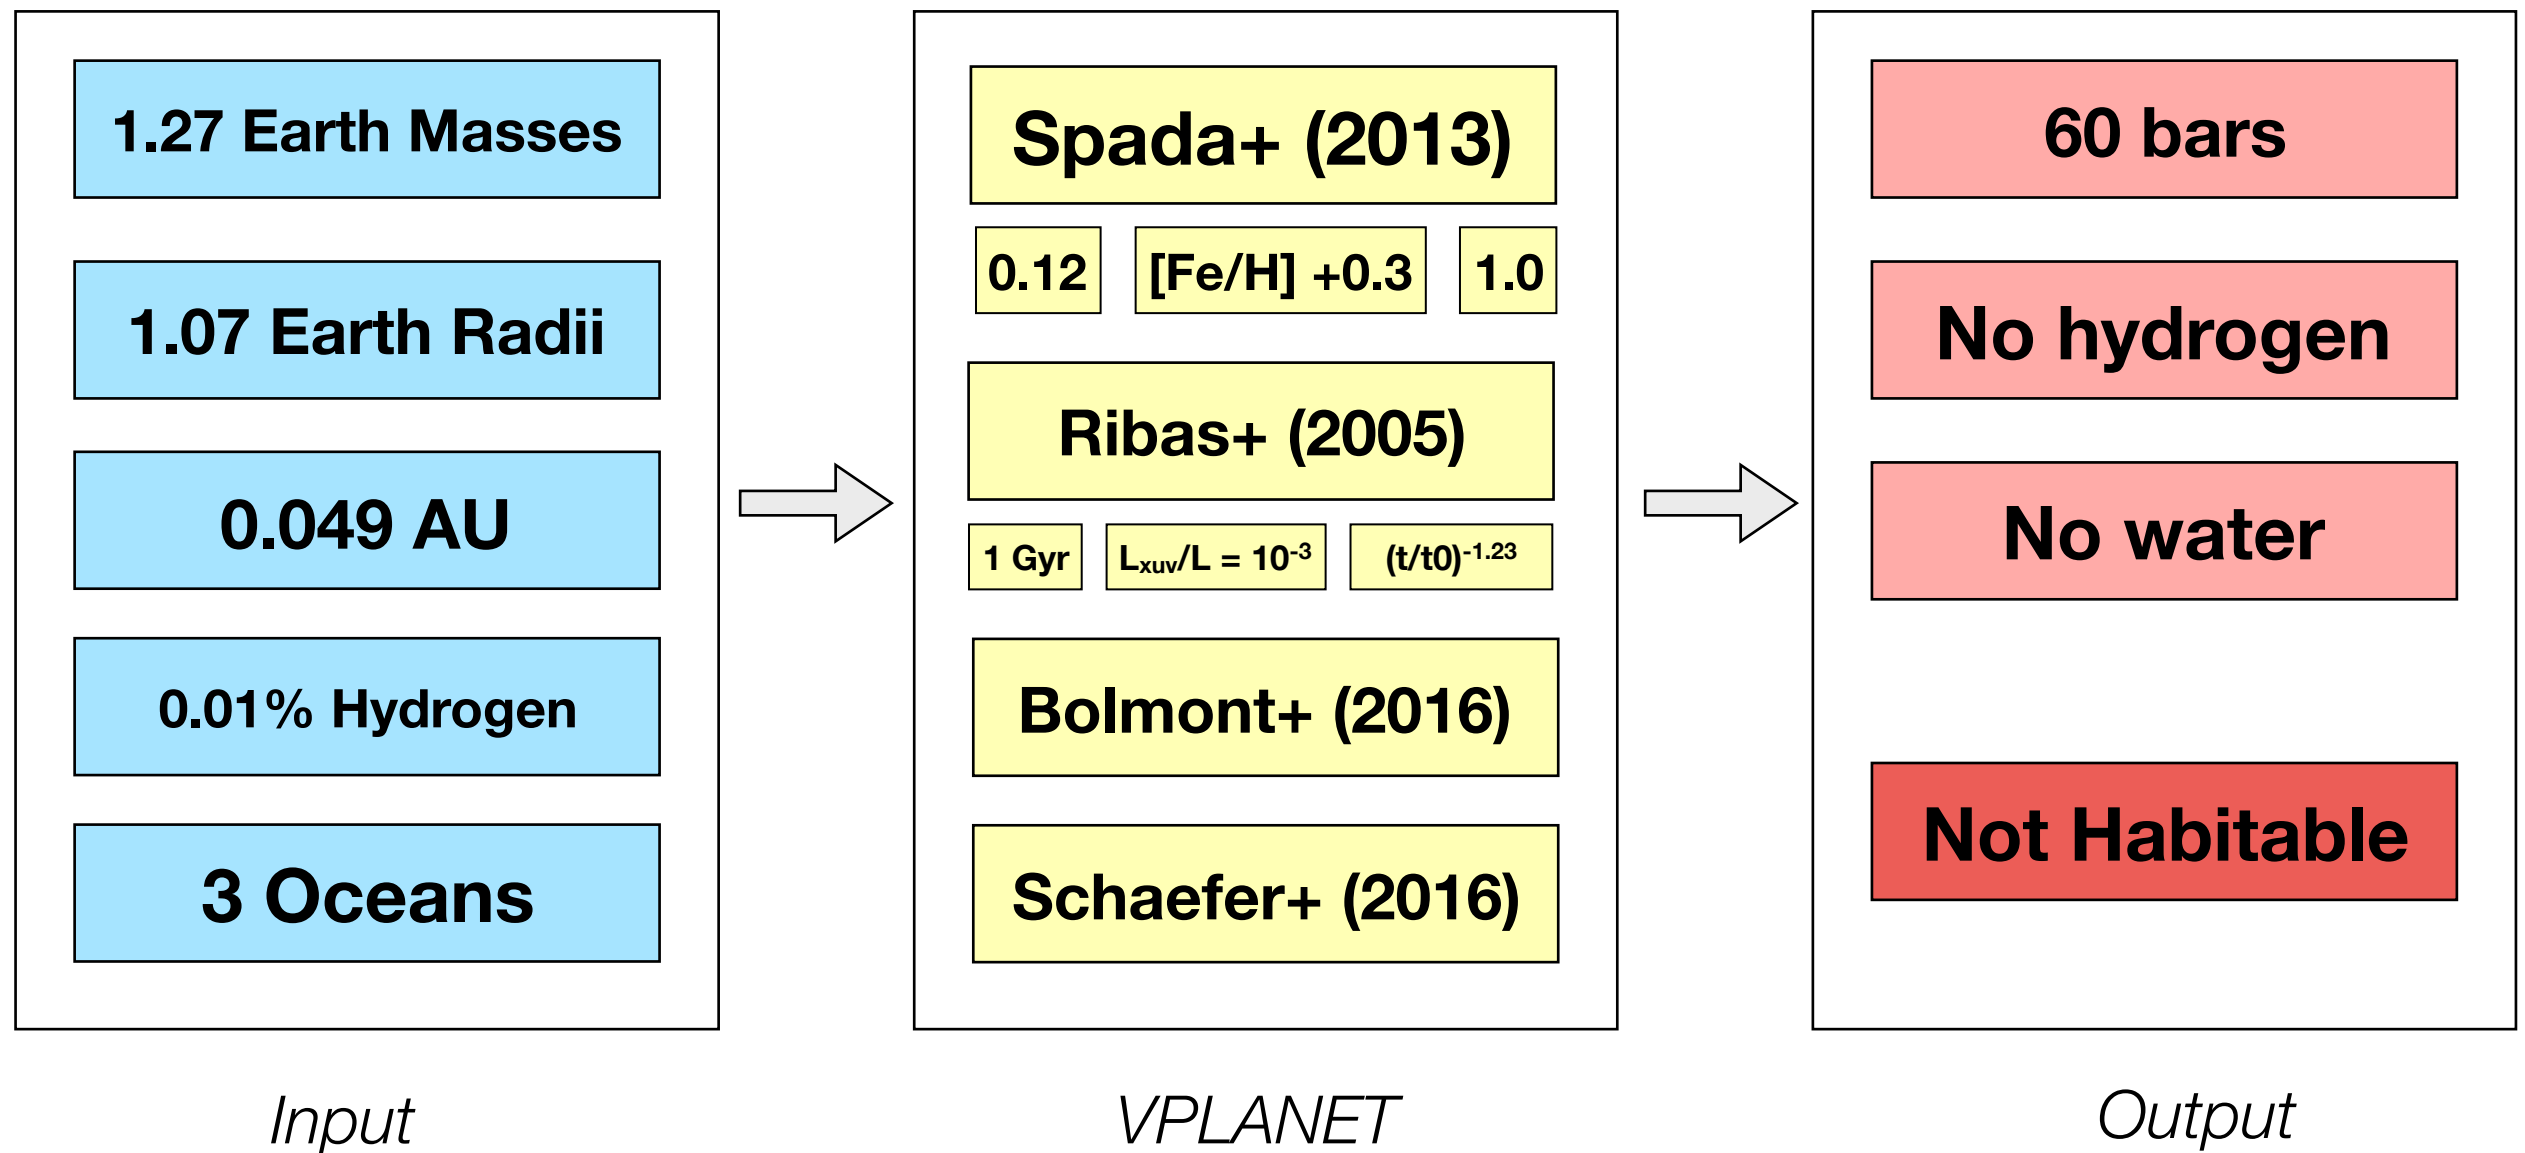

Proxima Cen b is not habitable

Conclusions

Proxima Cen b is not habitable

(Just kidding.)

Can we really say this with any confidence? _____

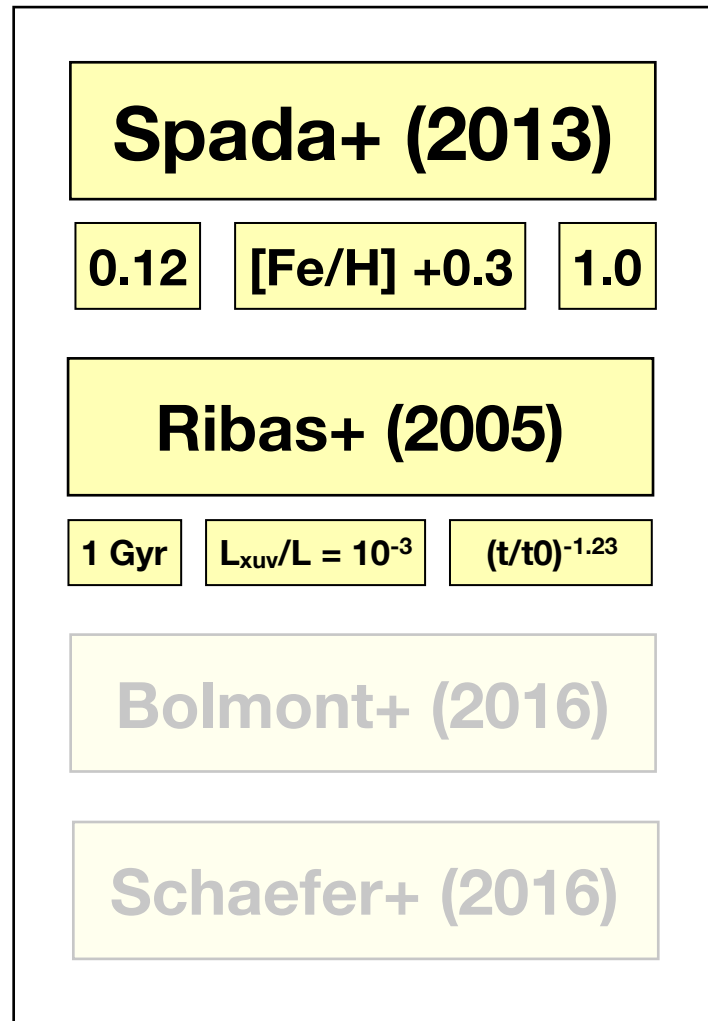

Uncertainties matter

Input

Data matters

VPLANET

Priors matter

Input

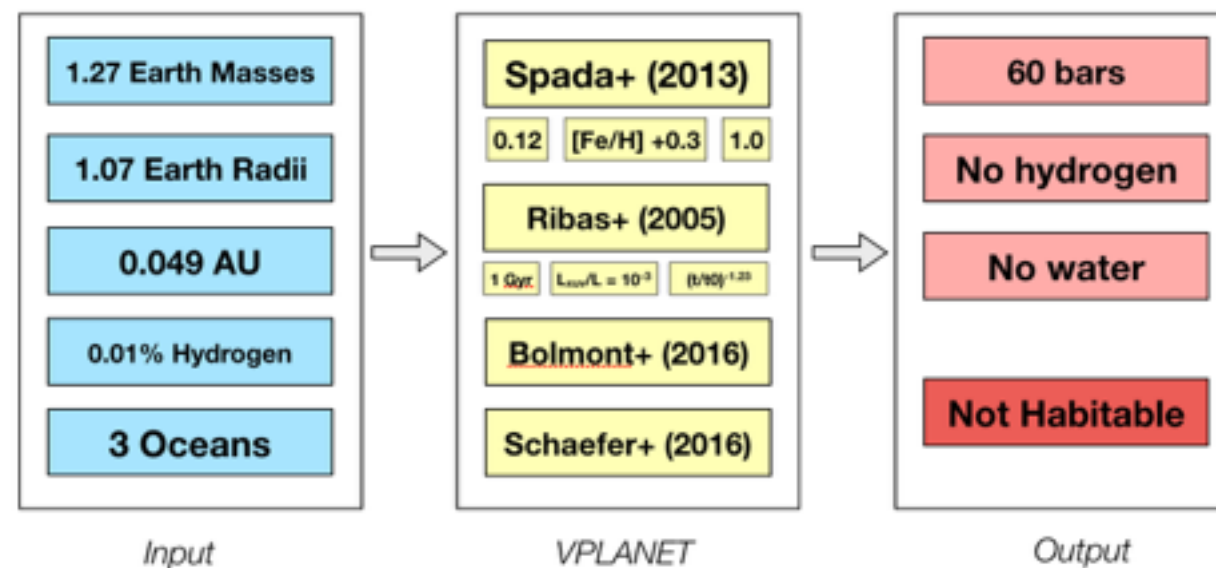

Mordasini et al. (2012)

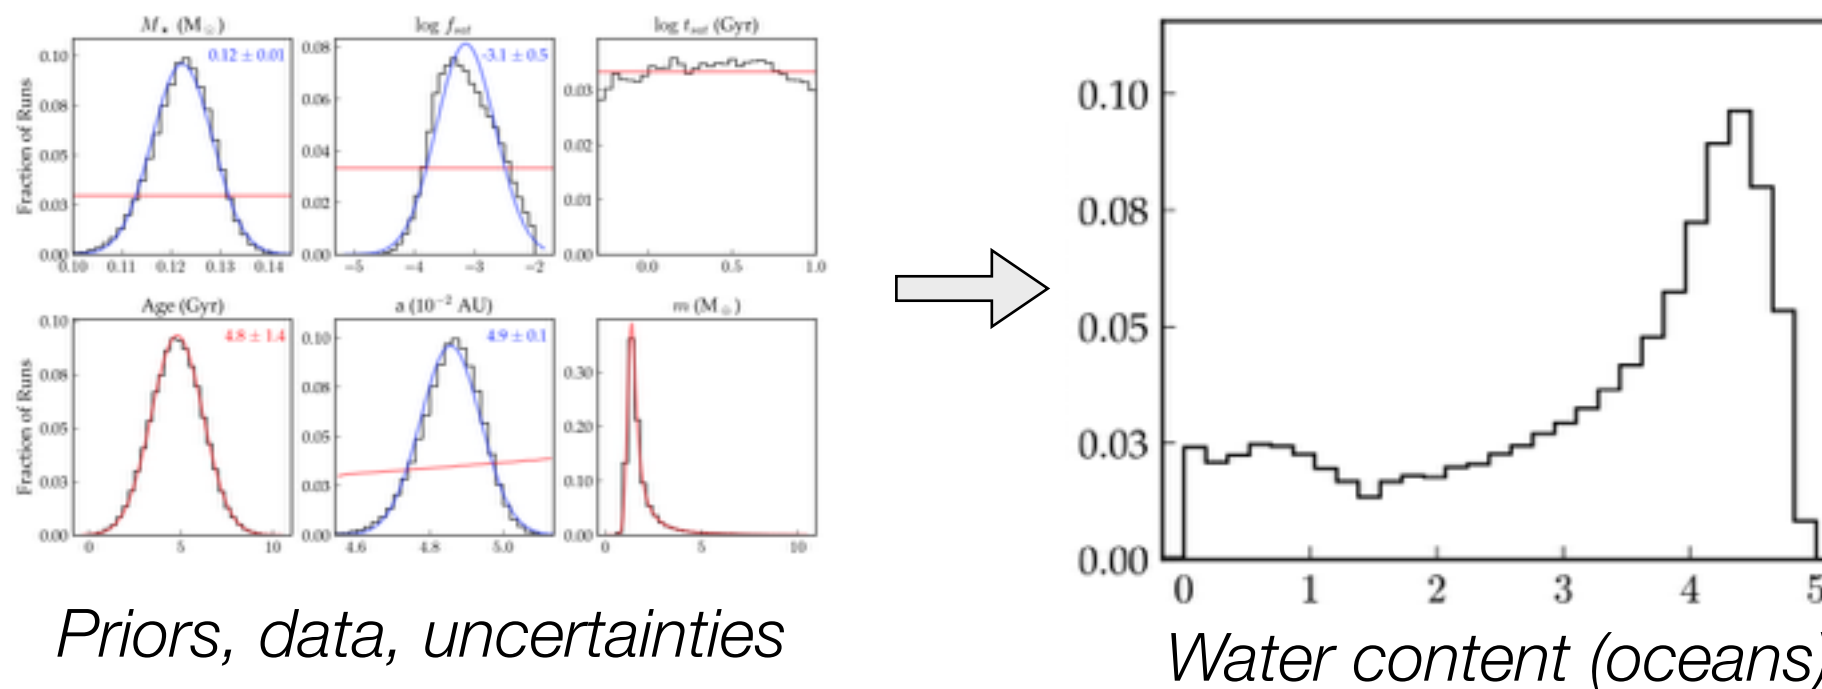

Mulders et al. (2015)

Maximum Likelihood

The Bayesian Approach

Framing the problem

Priors & data

$$\mathbf{x} = \{M_{\star}, t_{\star}, f_{\text{sat}}, t_{\text{sat}}, \beta_{\text{xuv}}, a, M_p, M_{\text{H}}^0, M_{\text{H}_2\text{O}}^0\}$$

Model outputs

$$\mathbf{y}(\mathbf{x}) = \{L_{\star}, L_{\text{xuv}}, M_{\text{H}}, M_{\text{H}_2\text{O}}, M_{\text{O}_2}\}$$

Framing the problem

Priors & data

$$\mathbf{x} = \{M_{\star}, t_{\star}, f_{\text{sat}}, t_{\text{sat}}, \beta_{\text{xuv}}, a, M_p, M_{\text{H}}^0, M_{\text{H}_2\text{O}}^0\}$$

Model outputs

$$\mathbf{y}(\mathbf{x}) = \{L_{\star}, L_{\text{xuv}}, M_{\text{H}}, M_{\text{H}_2\text{O}}, M_{\text{O}_2}\}$$

Likelihood Function

$$\ln \mathcal{L}(\mathbf{x}) = -\frac{1}{2} \left[\frac{(L_{\star}(\mathbf{x}) - L_{\star})^2}{\sigma_{L_{\star}}^2} + \frac{(L_{\text{xuv}}(\mathbf{x}) - L_{\text{xuv}})^2}{\sigma_{L_{\text{xuv}}}^2} \right] + \ln \text{Prior}(\mathbf{x}) + C$$

Markov Chain Monte Carlo (MCMC)

$$\ln \mathcal{L}(\mathbf{x}) \rightarrow P(M_{\text{H}_2\text{O}})$$

Stellar Evolution

Posterior samples

Water Evolution*

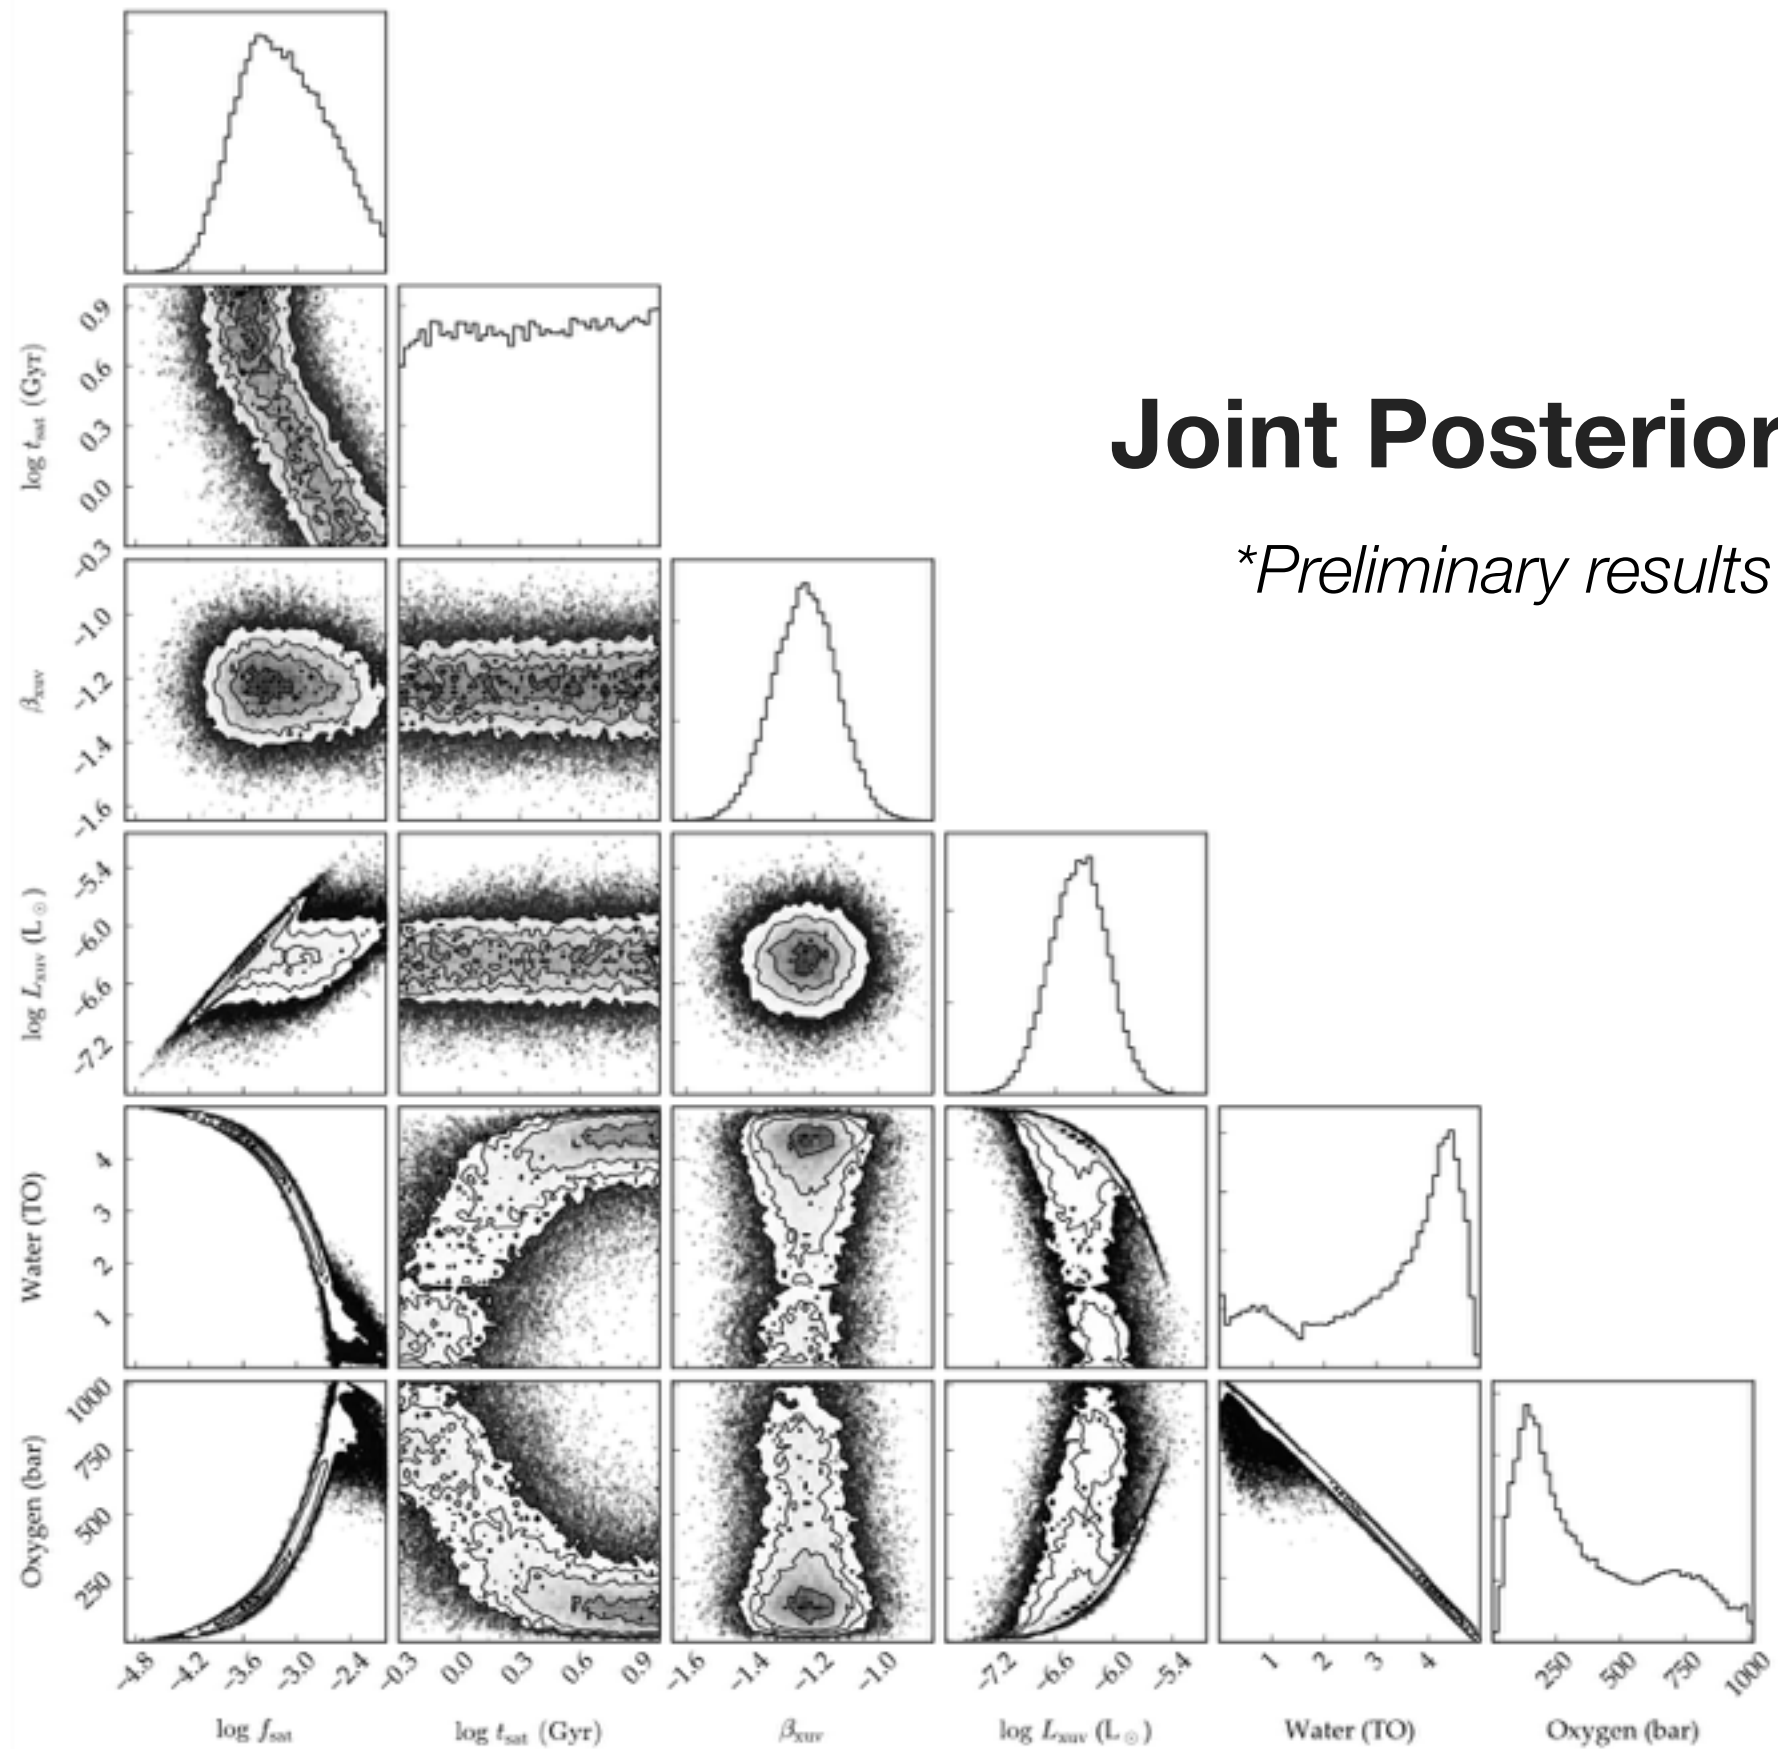

**Not marginalized over population synthesis outputs
($M_{H_2O}^0 = 5$ Oceans, $M_H^0 = 0$)*

***Inefficient O_2 sinks*

Joint Posteriors*

**Preliminary results*

Conclusions *(For real this time)*

We must account for the **uncertainty** on all model inputs.

We must correctly account for all **prior information**.*

A flat prior is **not uninformative!*

We need **robust posterior distributions** to assess habitability.

This will be an **incremental**, iterative problem.
